

Basically Wooden's organiser for Gloomhaven - How it fits in the box.

The plywood boxes and trays all have specific places. The pictures below show how we managed to get everything in with very little lid lift. The finishing off with the multi shaped boards is a killer and there is no correct way but if you get the books and board in as shown the job is a lot easier.

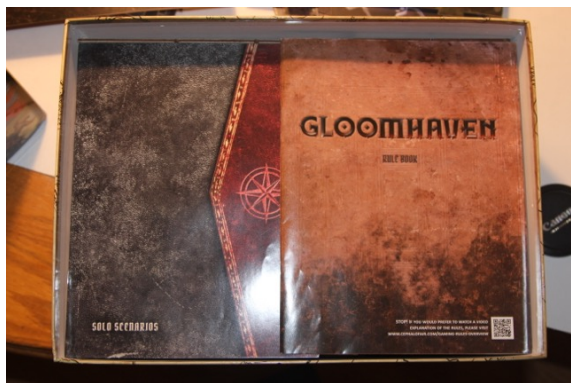

Layer 1

Now add the inner tray, holding the stands and tokens, that fits into the top of the minis boxes. Follow this with the coins, & large monster trays.

Now the small monster tray and dials. Everything should be level now.

Fit the two token trays.

Now the two thinner instruction manuals

Now the thick ring binder and smaller tiles to the side

Now the board and more thin boards.

Follow up with the remaining boards. There is no perfect way but the following pictures give you some ideas.
